# CSS

In this assignment, you will take a complete HTML page (the one you made in the HTML fundamentals exercise), and style it using CSS. You are not allowed to make modifications to the page – it should be unchanged, with the possible exception of adding classes or ids to elements.

Required Features:

• All text on the page should use a sans-serif font family.
• The page should be 1024 pixels wide, and be centered on the page, with equal margins to the left and right.
• Give the page the appearance of the example placed in picture below, using only your own CSS code.

• (The gray boxes show where elements should be positioned – you do not need them to appear as gray boxes on the page)

Optional:

• The second paragraph of the first article element should be written in bold text, with a blue text colour.
• In the unordered list in the side content, items should appear in alternating colours (green and red, as a suggestion).

Code Requirements:

• All the CSS code should come from the same file, and be linked into the HTML file through a link tag – there should be no style tags or style attributes in the HTML file at all.
