Layout and Views

For this assignment, you are to create an MVC Web Application from scratch. Use the ASP.NET Core Web Application project type, and the "Web Application (Model-View-Controller)" template to start with. This will give you the basic structure to build your project from.

Required Features:

- o General file structure of a MVC project. o A Layout file for your views to use. It should contain:
- o A header element, containing a page logo and a navigation menu o A container to be filled with each view.
- o A footer, containing the current date as an object, and your name.
- o A controller with at least three views: o About – Containing information about yourself (CV). o Contact – Containing your contact information.
- o Projects – Containing the assignments and projects you have finished.

Code Requirements:

- o You must use Razor commands at least to some extent in the layout and the views.
- o You must use a single layout for at least three views. o You must have at least one controller and three views.
