HTML

Your assignment is to build a basic HTML page structure, for use in later exercises. Don't focus at all on styling at this point – only make the HTML elements and their contents. Refer to W3Schools and Pluralsight for information on how to implement the required features.

Required Features:

• The page should be encoded using the UTF-8 character set
• A page title, defined in the head element.
• A header element containing a heading (h1) with the page name. It should also have a nav element with an unordered list of at least 3 links
• A container element for the main content of the page, containing a heading (h2), a paragraph of text and two article elements. Each should have filler text - at least 2 paragraphs each. One should have an image (use lorempixel.com)
• A aside element, containing a heading (h2) and an unordered list of nations, each list item containing an ordered list of the nation's three biggest cities
• A footer element, containing a copyright symbol and your name

Resources:

• http://www.w3schools.com/ - General HTML reference
• http://sv.lipsum.com/ - Filler Text
• http://lorempixel.com/ - Placeholder Images
• http://www.pluralsight.com/courses/front-end-web-app-html5-javascript-css (The first two chapters are relevant for this week)

Subjects Covered:

Basic HTML
• Containers
○ Header, Footer, Nav, Section, Article, Aside
• Lists
○ Ordered, Unordered
• Text
○ Span, Paragraph • Images • Headings
